SparkLearn Studio

The Idea

Crisis Classroom is an AI-powered, offline-first learning platform that delivers personalized micro-lessons and adaptive feedback to students in under-resourced or crisis-affected communities.

The Target

Students in low-connectivity or crisis-affected regions would benefit directly, along with teachers who need structured support. Schools, NGOs, and education programs would gain scalable tools to improve learning outcomes.

What it Solves

Crisis Classroom addresses learning loss, limited teacher resources, and unequal access to quality education by providing adaptive, low-bandwidth learning support tailored to each student's level.

How it works

We will develop a lightweight mobile MVP with downloadable lesson packs and AI-based assessment tools. After piloting with a small student group, we will refine content and scale through partnerships with schools and NGOs.
